

HIGHLIGHTS OF QUALIFICATIONS

- Developed a machine learning-based tire wear monitoring system, integrating IoT sensors and predictive models for real-time vehicle safety alerts.
- Designed and implemented a text-based game in Java, utilizing object-oriented programming (OOP), multithreading, and interactive gameplay elements.
- Completed a 5-week internship at Mohammed Bin Rashid Space Center (MBRSC), contributing to space research, data analysis, and system optimization.
- Strong foundation in networking, operating systems, and hardware with experience in Windows, Linux, macOS, and virtualized environments.
- Recognized for academic excellence, achieving Dean's List and Chancellor's List honors multiple times.
- Excellent problem-solving, leadership, and teamwork skills, demonstrated through research projects, software development, and collaborative technical work.

SUMMARY OF TECHNICAL QUALIFICATIONS

Certifications:

- Dean's List:** Spring 2022, Fall 2022, Spring 2023, Fall 2023, Spring 2024, Fall 2024
- Chancellor's List:** 2023, 2024

Operating Systems:

Windows, Windows Server, Unix, Linux, MacOSX, iOS, Android, ChromeOS, VMWare, VirtualBox

Networking:

LAN, WAN, Wireless, Cisco Networking Academy

Languages:

C, C++, Java, Python, SQL, JavaScript,Assembly

Web:

HTML, CSS, JavaScript

Applications:

Microsoft Office, Photoshop, Adobe CS5, MySQL, SQL Server, Oracle, Google Docs

Hardware/Systems:

PC, Mac

EDUCATION

Bachelor of Science in Computer Engineering | Expected: May 2025

American University of Sharjah, Sharjah, UAE | GPA: 3.8/4.0

PROJECTS

Worked on developing a machine learning based tire wear monitoring and warning system

- Developed a machine learning-driven tire wear monitoring system that analyzes real-time sensor data to assess tire conditions. The system utilizes IoT sensors to measure factors like temperature, and pressure, feeding the data into a predictive model trained to detect wear patterns. A mobile and in-car interface provides real-time alerts and predictive maintenance recommendations, enhancing vehicle safety and extending tire lifespan.

Developed a text-based game in java

- Developed a text-based role-playing game (RPG) in Java, utilizing object-oriented programming (OOP) principles and design patterns to create an interactive escape room experience.
- Implemented multithreading and thread synchronization, enabling efficient game mechanics, player health management, and dynamic interactions with in-game characters and puzzles.

INTERNSHIP

Integrated Solutions Intern (5 weeks)

Mohammed Bin Rashid Space Center (MBRSC), Dubai, UAE | Winter 2023

- Assisted in the development and integration of advanced technological solutions at Mohammed Bin Rashid Space Center (MBRSC), contributing to space-related research and innovation.
- Worked on data analysis and system optimization, gaining hands-on experience with cutting-edge aerospace technologies and collaborative problem-solving in a high-tech research environment.
